Dashboard 1: Executive Overview

Total Vehicles

150,407 electric vehicles are registered in the dataset.

This represents the total EV population available for analysis.

Average Electric Range

The average electric driving range is **67.83 km**.

Most registered EVs have moderate electric range, indicating a mix of older and newer models.

BEV vs PHEV

Battery Electric Vehicles (BEV): 116,741 (77.62%)

Plug-in Hybrid Electric Vehicles (PHEV): 33,666 (22.38%)

BEVs dominate the market, accounting for over three-quarters of all registered electric vehicles.

Electric Vehicles Registered by Model Year

EV registrations increased steadily from **2011 to 2023**.

2023 recorded the highest number of registrations (37.08K).

The decline in 2024 is likely due to incomplete or partial-year data.

Total Vehicles by State

Washington has the highest number of registered EVs in the dataset.

Most other states have comparatively lower EV adoption.

EV registrations are concentrated in a few leading states.

Top 10 Vehicle Manufacturers

Tesla is the market leader with **68.94K vehicles (52.7%)**.

Nissan and **Chevrolet** are the second and third largest manufacturers.

Tesla alone contributes more than half of all registered vehicles.

CAFV Eligibility

CAFV Eligible: 62.88K (41.81%)

CAFV Eligibility Unknown: 69.70K (46.34%)

CAFV Not Eligible: 17.83K (11.85%)

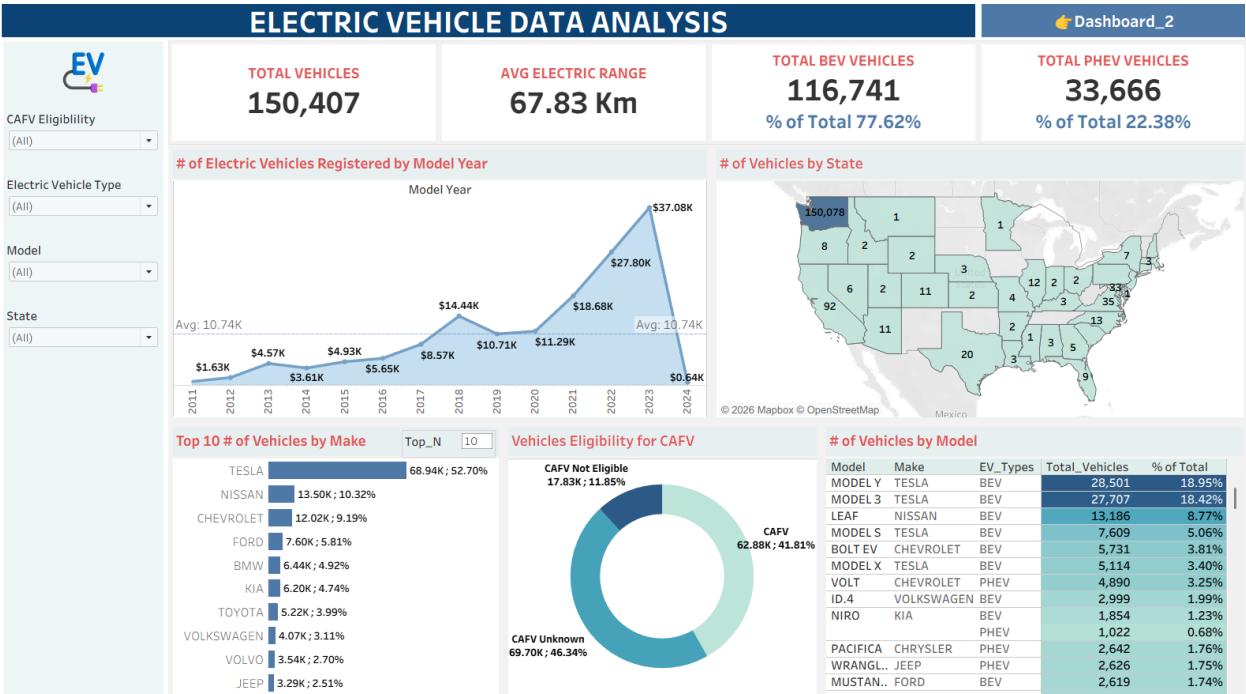

Nearly half of the vehicles have an unknown CAFV eligibility status.

Top Vehicle Models

Tesla Model Y is the most registered EV model.

Tesla Model 3 ranks second.

Tesla models dominate the list of most popular electric vehicles.

Vehicle counts gradually decrease as electric range increases.

High-range electric vehicles (300+ km) are comparatively fewer, indicating that many vehicles in the dataset are earlier-generation models or plug-in hybrids.

EV Type by Model Year

BEV registrations have increased consistently over time.

PHEV registrations have also grown but at a much slower rate.

The gap between BEVs and PHEVs has widened significantly in recent years.

2023 recorded the highest registrations for both vehicle types.
